Subject index

AAA
A 200-amino acid – ATPase module in search of a basic function: CONFALONIERI AND DUGUET **17**, 639.
ACC oxidase
Ethylene: a tiny molecule with great potential: WOLTERING AND DE VRIJE **17**, 287.
ACC synthase
Ethylene: a tiny molecule with great potential: WOLTERING AND DE VRIJE **17**, 287.
Active site
DNA topoisomerase II mutations and resistance to anti-tumor drugs: VASSETZKY, ALGHISI AND GASSER **17**, 767.
Adeno-associated virus (AAV)
The cryptic life style of adeno-associated virus: BERNS AND LINDEN **17**, 237.
Aggrecan link protein: biomechanics and
The chondrocyte, architect of cartilage: MUIR **17**, 1039.
Aleurone differentiation
Pattern and process of wall formation in developing endosperm: OLSEN, LEMMON AND BROWN **17**, 803.
Alkylating drugs
Alkylation of DNA and its aftermath: LAWLEY **17**, 561.
Alternative splicing
CD44 isoforms during differentiation and development: RUIZ, SCHWARZLER AND GÜNTHERT **17**, 17.
Alzheimer's disease
Physiological and pathological interrelationships of amyloid B peptide and the amyloid precursor protein: LARNER **17**, 819.
Steps towards a mouse model of Alzheimer's disease: CROWTHER **17**, 593.
Amnioserosa
How many receptors does it take?: WHARTON **17**, 13.
Amyloid β peptide (βA4)
Physiological and pathological interrelationships of amyloid β peptide and the amyloid precursor protein: LARNER **17**, 819.
Steps towards a mouse model of Alzheimer's disease: CROWTHER **17**, 593.
Amyloid precursor protein (APP)
Physiological and pathological interrelationships of amyloid β peptide and the amyloid precursor protein: LARNER **17**, 819.
Anaphase
Frontier questions about sister chromatid separation in anaphase: YANAGIDA **17**, 519.
The formation and functioning of yeast mitotic spindles: MASUDA **17**, 45.
Aneuploidy
Rapid detection of selected aneuploidies by quantitative fluorescent PCR: ADINOLFI, SHERLOCK AND PERTL **17**, 661.
Angiosperms
Multi-allelic self-incompatibility polymorphisms in plants: CHARLESWORTH **17**, 31.
Animal models of PKD
Animal models of polycystic kidney disease: AZIZ **17**, 703.
Anterior-posterior polarity
Cell-cell signalling, microtubule organization and RNA localization: is PKA a link?: LASKO **17**, 105.
The anterior-posterior and dorsal-ventral axes have a common origin in *Drosophila melanogaster*: MUNN AND STEWARD **17**, 920.
Anti-tumor drug resistance
DNA topoisomerase II mutations and resistance to anti-tumor drugs: VASSETZKY, ALGHISI AND GASSER **17**, 767.
Antimicrobial activity
Seminalplasmin: SITARAM AND NAGARAJ **17**, 415.
Antirrhinum majus
Does Flo flow? Cell layer interactions during floral development: SZYMKOWIAK **17**, 387.
Antisense oligonucleotides and technology
The therapeutic potential of antisense oligodeoxynucleotides: SHARMA AND NARAYANAN **17**, 1055.
AP endonucleases
Structure and function of apurinic/apyrimidinic endonucleases: BARZILAY AND HICKSON **17**, 713.
AP-1
Modulation of AP-1/ATF transcription factor activity by the adenovirus-E1A oncogene products: HAGMEYER, ANGEL AND VAN DAM **17**, 621.
Stress signaling in yeast: RUIS AND SCHÜLLER **17**, 959.
apex-1
Determinants of blastomere identity in the early *C. elegans* embryo: BOWERMAN **17**, 405.
Apical surface
Regulation of protein traffic in polarized epithelial cells: MOSTOV AND CARDONE **17**, 129.
Apoptosis
bcl-2, a novel regulator of cell death: HOCKENBERY **17**, 631.
Cell death suffers a TKO: OSBORNE AND SCHWARTZ **17**, 557.
Dual mechanisms of lymphocyte-mediated cytotoxicity serve to control and deliver the immune response: SMYTH **17**, 891.
Out-of body experiences: cell-free cell death: HENGARTNER **17**, 549.
Appendages
Compartments and appendage development in *Drosophila*: BLAIR **17**, 299.
Apurinic/apyrimidinic (AP) sites
Structure and function of apurinic/apyrimidinic endonucleases: BARZILAY AND HICKSON **17**, 713.
Arabidopsis thaliana
Illuminating plant development: DUCKETT AND GRAY **17**, 101.
Regulation of plant form: identification of a molecule controlling cell expansion: TORII AND DENG **17**, 383.
Two ways to skin a plant: the analysis of root and shoot epidermal development in *Arabidopsis*: DOLAN AND ROBERTS **17**, 865.
Arachidonate metabolism
Inflammation, reproduction, cancer and all that...The regulation and role of the inducible prostaglandin synthase: HERSCHMAN, XIE AND REDDY **17**, 1031
Ascaris
The enigmatic oxygen-avid hemoglobin of *Ascaris*: GOLDBERG **17**, 177.
Asexual lineage
Fractious chromosomes: hybrid disruption and the origin of selfish genetic elements: MCVEAN **17**, 579.
Asymmetry
The anterior-posterior and dorsal-ventral axes have a common origin in *Drosophila melanogaster*: MUNN AND STEWARD **17**, 920.
ATF
Modulation of AP-1/ATF transcription factor activity by the adenovirus-E1A oncogene products: HAGMEYER, ANGEL AND VAN DAM **17**, 621.
Atherosclerosis
Cytomegalovirus and atherosclerosis: MELNICK, ADAM AND DEBAKEY **17**, 899.
ATP-dependent protein clamp
A 200-amino acid – ATPase module in search of a basic function: CONFALONIERI AND DUGUET **17**, 639.
ATPase module
A 200-amino acid – ATPase module in search of a basic function: CONFALONIERI AND DUGUET **17**, 639.
Auxin
Root gravitropism: MASSON **17**, 119.
Axonemes
Keeping the beat: form meets function in the *Chlamydomonas* flagellum: JOHNSON **17**, 847.
B chromosomes
Fractious chromosomes: hybrid disruption and the origin of selfish genetic elements: MCVEAN **17**, 579.
β1,4-galactosyltransferase
Biological consequences of targeting β1,4-galactosyltransferase to two different subcellular compartments: EVANS, YOUAKIM AND SHUR **17**, 261.
Bacteria
Cell shape and chromosome partition in prokaryotes or, Why *E. coli* is rod-shaped and haploid: DONACHIE, ADDINALL AND BEGG **17**, 569.
Does replication-induced transcription regulate synthesis of the myriad low copy number proteins of *Escherichia coli*?: GUPTASARMA **17**, 987.
Overview of controls in the *Escherichia coli* cell cycle: VINELLA AND D'ARI **17**, 527.
Recombination, mutation and the origin of species: COX **17**, 747.
Bacterial colony patterns
The significances of bacterial colony patterns: SHAPIRO **17**, 597.

© ICSU Press 1996 pp. 1094–1105

Barley
Pattern and process of wall formation in developing endosperm: OLSEN, LEMMON AND BROWN **17**, 803.
Basolateral surface
Regulation of protein traffic in polarized epithelial cells: MOSTOV AND CARDONE **17**, 129.
***bcl-2* gene family**
bcl-2, a novel regulator of cell death: HOCKENBERY **17**, 631.
Bias
Model systems in developmental biology: BOLKER **17**, 451.
Biological unity
Overview of controls in the *Escherichia coli* cell cycle: VINELLA AND D'ARI **17**, 527.
Biosynthesis
Ethylene: a tiny molecule with great potential: WOLTERING AND DE VRIJE **17**, 287.
Membrane protein assembly: Rules of the game: VON HEIJNE **17**, 25.
The genetics of lantibiotic biosynthesis: JACK, BIERBAUM, HEIDRICH AND SAHL **17**, 793.
Blastocyst
Epidermal growth factor receptor function in early mammalian development: WILEY, ADAMSON AND TSARK **17**, 839.
Blastomere
Determinants of blastomere identity in the early *C. elegans* embryo: BOWERMAN **17**, 405.
Bone loss
c-fos and bone loss: a proto-oncogene regulates osteoclast lineage determination: JACENKO **17**, 277.
Brain lamination
Reelin: a novel extracellular matrix protein involved in brain lamination: RUGARLI AND BALLABIO **17**, 832.
C period
Does replication-induced transcription regulate synthesis of the myriad low copy number proteins of *Escherichia coli*?: GUPTASARMA **17**, 987.
c-fos
c-fos and bone loss: a proto-oncogene regulates osteoclast lineage determination: JACENKO **17**, 277.
Modulation of AP-1/ATF transcription factor activity by the adenovirus-E1A oncogene products: HAGMEYER, ANGEL AND VAN DAM **17**, 621.
***c-myb* gene**
Myb: an old oncoprotein with new roles: THOMPSON AND RAMSAY **17**, 341.
Cadherin
The making of a fly leg: a model for epithelial morphogenesis: VON KALM, FRISTROM AND FRISTROM **17**, 693.
Caenorhabditis elegans
Determinants of blastomere identity in the early *C. elegans* embryo: BOWERMAN **17**, 405.
Moving up the hierarchy: A hypothesis on the evolution of a genetic sex determination pathway: WILKINS **17**, 71.
MyoD and myogenesis in *C. elegans*: KRAUSE **17**, 219.
Calcium
The dynamics of cytosolic calcium in photoreceptor cells: WILLIAMS **17**, 282.
Calcium ions
Root gravitropism: MASSON **17**, 119.
Calcium oscillations and signalling
Calcium signalling and cell proliferation: BERRIDGE **17**, 491.
Calcium transport
Seminalplasmin: SITARAM AND NAGARAJ **17**, 415.
Calcium-binding sites
E-cadherin as a tumor (invasion) suppressor gene: BIRCHMEIER **17**, 97.
Caldesmon
Structure-function relationships in smooth muscle: the missing links: SMALL **17**, 785.
Calponin
Structure-function relationships in smooth muscle: the missing links: SMALL **17**, 785.
Caltrin
Seminalplasmin: SITARAM AND NAGARAJ **17**, 415.
Canalization
Model systems in developmental biology: BOLKER **17**, 451.
Cancer
Giant leap for p53, small step for drug design: ANDERSON AND TEGTMEYER **17**, 3.
Cancer chemotherapy
Alkylation of DNA and its aftermath: LAWLEY **17**, 561.
Carcinoma
Life and death by p53: ELLEDGE AND LEE **17**, 923.
Cartilage collagens
The chondrocyte, architect of cartilage: MUIR **17**, 1039.
Catalytic sites
A radical approach to enzyme catalysis: MARSH **17**, 431.
CD44 isoforms
CD44 isoforms during differentiation and development: RUIZ, SCHWARZLER AND GÜNTHERT **17**, 17.
cdc2 kinase
Drosophila development pulls the strings of the cell cycle: REED **17**, 553.
CDK/cyclin complexes
Cyclin-dependent protein kinases: key regulators of the eukaryotic cell cycle: NIGG **17**, 471.
Cell adhesion molecules
Biological consequences of targeting β1,4-galactosyltransferase to two different subcellular compartments: EVANS, YOUAKIM AND SHUR **17**, 261.
CD44 isoforms during differentiation and development: RUIZ, SCHWARZLER AND GÜNTHERT **17**, 17.
Cell cycle
Are there DNA damage checkpoints in *E. coli*?: BRIDGES **17**, 63.
bcl-2, a novel regulator of cell death: HOCKENBERY **17**, 631.
Calcium signalling and cell proliferation: BERRIDGE **17**, 491.
Cell shape and chromosome partition in prokaryotes or, Why *E. coli* is rod-shaped and haploid: DONACHIE, ADDINALL AND BEGG **17**, 569.
Cyclin-dependent protein kinases: key regulators of the eukaryotic cell cycle: NIGG **17**, 471.
Drosophila development pulls the strings of the cell cycle: REED **17**, 553.
Frontier questions about sister chromatid separation in anaphase: YANAGIDA **17**, 519.
G_1 regulation and checkpoints operating around START in fission yeast: WOOLLARD AND NURSE **17**, 481.
Histone H4: TURNER **17**, 1013.
Human Papillomavirus E6 and E7: proteins which deregulate the cell cycle: TOMMASINO AND CRAWFORD **17**, 509.
Is there a unique form of chromatin at the *Saccharomyces cerevisiae* centromeres?: BASRAI AND HIETER **17**, 669.
Nuclear organization: uniting replication foci, chromatin domains and chromosome structure: JACKSON **17**, 587.
Origins of G_1 arrest in senescent human fibroblasts: STEIN AND DULIC **17**, 537.
Overview of controls in the *Escherichia coli* cell cycle: VINELLA AND D'ARI **17**, 527.
Tumour suppressors, kinases and clamps: how p53 regulates the cell cycle in response to DNA damage: COX AND LANE **17**, 501.
Cell death
bcl-2, a novel regulator of cell death: HOCKENBERY **17**, 631.
Cell death suffers a TKO: OSBORNE AND SCHWARTZ **17**, 557.
Disease lesion mimics of maize: a model for cell death in plants: JOHAL, HULBERT AND BRIGGS **17**, 685.
Ubiquitin in homeostasis, development and disease: MULLER AND SCHWARTZ **17**, 677.
Cell expansion
Regulation of plant form: identification of a molecule controlling cell expansion: TORII AND DENG **17**, 383.
Cell fusion
Surrogate cells or Trojan horses: BANGHAM **17**, 1075.
Cell proliferation
Calcium signalling and cell proliferation: BERRIDGE **17**, 491.
Cell shape
Cell shape and chromosome partition in prokaryotes or, Why *E. coli* is rod-shaped and haploid: DONACHIE, ADDINALL AND BEGG **17**, 569.
Cell stickiness
Surrogate cells or Trojan horses: BANGHAM **17**, 1075.
Cell surface receptors
Nuclear/growth factors: PROCHIANTZ AND THÉODORE **17**, 39.
Cell wall
Regulation of plant form: identification of a molecule controlling cell expansion: TORII AND DENG **17**, 383.
Cell-cell adhesion
E-cadherin as a tumor (invasion) suppressor gene: BIRCHMEIER **17**, 97.
Cell-cell communication
Cell-cell signalling, microtubule organization and RNA localization: is PKA a link?: LASKO **17**, 105.
Nuclear/growth factors: PROCHIANTZ AND THÉODORE **17**, 39.
Central nervous system
Precursor cell types in the germinal zone of the cerebral cortex: WILLIAMS **17**, 391.
Centromere
Is there a unique form of chromatin at the

Saccharomyces cerevisiae centromeres?: BASRAI AND HIETER **17**, 669.
Cerebral cortex
Precursor cell types in the germinal zone of the cerebral cortex: WILLIAMS **17**, 391.
Channels model
The channels model of nuclear matrix structure: RAZIN AND GROMOVA **17**, 443.
Checkpoints
G_1 regulation and checkpoints operating around START in fission yeast: WOOLLARD AND NURSE **17**, 481.
Chemical probes
Trichostatin A and trapoxin: novel chemical probes for the role of histone acetylation in chromatin structure and function: YOSHIDA, HORINOUCHI AND BEPPU **17**, 423.
Chemical signalling
The significances of bacterial colony patterns: SHAPIRO **17**, 597.
Chimeric plants
Does Flo flow? Cell layer interactions during floral development: SZYMKOWIAK **17**, 387.
Chlamydomonas
Keeping the beat: form meets function in the *Chlamydomonas* flagellum: JOHNSON **17**, 847.
Chloroplast
Rubisco rules fall; gene transfer triumphs: PALMER **17**, 1005.
Chromatid segregation
The formation and functioning of yeast mitotic spindles: MASUDA **17**, 45.
Chromatid separation
Frontier questions about sister chromatid separation in anaphase: YANAGIDA **17**, 519.
Chromatin
Eukaryotic DNA methyltransferases – structure and function: ADAMS **17**, 139.
Is there a unique form of chromatin at the *Saccharomyces cerevisiae* centromeres?: BASRAI AND HIETER **17**, 669.
Nuclear organization: uniting replication foci, chromatin domains and chromosome structure: JACKSON **17**, 587.
Nucleosomal anatomy – where are the histones?: PRUSS, HAYES AND WOLFFE **17**, 161.
Trichostatin A and trapoxin: novel chemical probes for the role of histone acetylation in chromatin structure and function: YOSHIDA, HORINOUCHI AND BEPPU **17**, 423.
Chromosomal abnormalities
Rapid detection of selected aneuploidies by quantitative fluorescent PCR: ADINOLFI, SHERLOCK AND PERTL **17**, 661.
Chromosomal double-strand breaks
In vivo biochemistry: physical monitoring of recombination induced by site-specific endonucleases: HABER **17**, 609.
Chromosomes
Are there DNA damage checkpoints in *E. coli*?: BRIDGES **17**, 63.
Chromosomes take an active role in spindle assembly: WATERS AND SALMON **17**, 911.
Fractious chromosomes: hybrid disruption and the origin of selfish genetic elements: MCVEAN **17**, 579.
The channels model of nuclear matrix structure: RAZIN AND GROMOVA **17**, 443.
The formation and functioning of yeast mitotic spindles: MASUDA **17**, 45.
Chromosome condensation
The SMC proteins and the coming of age of the chromosome scaffold hypothesis: SAITOH, GOLDBERG AND EARNSHAW **17**, 759.
Chromosome partition
Cell shape and chromosome partition in prokaryotes or, Why *E. coli* is rod-shaped and haploid: DONACHIE, ADDINALL AND BEGG **17**, 569.
Chromosome scaffold
The SMC proteins and the coming of age of the chromosome scaffold hypothesis: SAITOH, GOLDBERG AND EARNSHAW **17**, 759.
Chromosome transmission
Is there a unique form of chromatin at the *Saccharomyces cerevisiae* centromeres?: BASRAI AND HIETER **17**, 669.
Ciliogenesis
Ciliogenesis in sea urchin embryos – a subroutine in the program of development: STEPHENS **17**, 331.
Circadian rhythm
Are competing intermolecular and intramolecular interactions of PERIOD protein important for the regulation of circadian rhythms in *Drosophila*?: PRICE **17**, 583.
c-jun
Modulation of AP-1/ATF transcription factor activity by the adenovirus-E1A oncogene products: HAGMEYER, ANGEL AND VAN DAM **17**, 621.
Clusters
Towards unravelling the *Igf2/H19* imprinted domain: VIVILLE AND SURANI **17**, 835.
CMV vaccine
Cytomegalovirus and atherosclerosis: MELNICK, ADAM AND DEBAKEY **17**, 899.
Cnidaria
The cnidarian cnidocyte, a high-tech cellular weaponry: TARDENT **17**, 351.
Cnidocyte
The cnidarian cnidocyte, a high-tech cellular weaponry: TARDENT **17**, 351.
CO_2 fixation
Rubisco rules fall; gene transfer triumphs: PALMER **17**, 1005.
Compartmentalization
Compartments and appendage development in *Drosophila*: BLAIR **17**, 299.
Conservation
Structure-function relationships in Src family and related protein tyrosine kinases: SUPERTI-FURGA AND COURTNEIDGE **17**, 321.
COP gene products
Illuminating plant development: DUCKETT AND GRAY **17**, 101.
Cosmetics
Surrogate cells or Trojan horses: BANGHAM **17**, 1075.
CSE4
Is there a unique form of chromatin at the *Saccharomyces cerevisiae* centromeres?: BASRAI AND HIETER **17**, 669.
Cyclin-dependent protein kinases
Cyclin-dependent protein kinases: key regulators of the eukaryotic cell cycle: NIGG **17**, 471.
Origins of G_1 arrest in senescent human fibroblasts: STEIN AND DULIC **17**, 537.
Cyclins
Cyclin-dependent protein kinases: key regulators of the eukaryotic cell cycle: NIGG **17**, 471.
G_1 regulation and checkpoints operating around START in fission yeast: WOOLLARD AND NURSE **17**, 481.
Cyst
The cnidarian cnidocyte, a high-tech cellular weaponry: TARDENT **17**, 351.
Cytokine interferon-gamma (IFN-gamma)
Cell death suffers a TKO: OSBORNE AND SCHWARTZ **17**, 557.
Cytokines
The macrophage: GORDON **17**, 977.
Cytomegalovirus (CMV)
Cytomegalovirus and atherosclerosis: MELNICK, ADAM AND DEBAKEY **17**, 899.
Cytoskeleton
Biological consequences of targeting β1,4-galactosyltransferase to two different subcellular compartments: EVANS, YOUAKIM AND SHUR **17**, 261.
Overview of controls in the *Escherichia coli* cell cycle: VINELLA AND D'ARI **17**, 527.
Signaling, mitogenesis and the cytoskeleton: where the action is: CARRAWAY AND CARRAWAY **17**, 171.
Structure-function relationships in smooth muscle: the missing links: SMALL **17**, 785.
Cytosol
The dynamics of cytosolic calcium in photoreceptor cells: WILLIAMS **17**, 282.
Cytotoxicity
Dual mechanisms of lymphocyte-mediated cytotoxicity serve to control and deliver the immune response: SMYTH **17**, 891.
DA box
The SMC proteins and the coming of age of the chromosome scaffold hypothesis: SAITOH, GOLDBERG AND EARNSHAW **17**, 759.
Database
Development, databases and the internet: BARD AND DAVIES **17**, 999.
Death extract
Out-of body experiences: cell-free cell death: HENGARTNER **17**, 549.
Decapentaplegic (DPP)
How many signals does it take?: VENKATESH AND BODMER **17**, 754.
Deinococcus radiodurans
A model for repair of radiation-induced DNA double-strand breaks in the extreme radiophile *Deinococcus radiodurans*: MINTON AND DALY **17**, 457.
Development
A unique role for enhancers is revealed during early mouse development: MAJUMDER AND DEPAMPHILIS **17**, 881.
Axes, boundaries and coordinates: the ABCs of fly leg development: HELD JR. **17**, 721.
CD44 isoforms during differentiation and development: RUIZ, SCHWARZLER AND GÜNTHERT **17**, 17.
Ciliogenesis in sea urchin embryos – a subroutine in the program of development: STEPHENS **17**, 331.
Compartments and appendage development in *Drosophila*: BLAIR **17**, 299.
Development, databases and the internet: BARD AND DAVIES **17**, 999.

Epidermal growth factor receptor function in early mammalian development: WILEY, ADAMSON AND TSARK **17**, 839.
Ethylene: a tiny molecule with great potential: WOLTERING AND DE VRIJE **17**, 287.
Illuminating plant development: DUCKETT AND GRAY **17**, 101.
Left-right asymmetry in vertebrates: ALMIRANTIS **17**, 79.
Model systems in developmental biology: BOLKER **17**, 451.
MyoD and myogenesis in *C. elegans*: KRAUSE **17**, 219.
Nm23/nucleoside diphosphate kinase: Toward a structural and biochemical understanding of its biological functions: DE LA ROSA, WILLIAMS AND STEEG **17**, 53.
Retinoic acid and the differentiation of lymphohaemopoietic stem cells: GÖTTGENS AND GREEN **17**, 187.
The cnidarian cnidocyte, a high-tech cellular weaponry: TARDENT **17**, 351.
The initiation of senescence and its relationship to embryonic cell differentiation: ROSENBERGER **17**, 257.
The macrophage: GORDON **17**, 977.
The MyoD family of transcription factors and skeletal myogenesis: RUDNICKI AND JAENISCH **17**, 203.

Diminuto (DIM)
Regulation of plant form: identification of a molecule controlling cell expansion: TORII AND DENG **17**, 383.

Dinoflagellate
Rubisco rules fall; gene transfer triumphs: PALMER **17**, 1005.

Disc patterning
Compartments and appendage development in *Drosophila*: BLAIR **17**, 299.

Disease lesion mimics
Disease lesion mimics of maize: a model for cell death in plants: JOHAL, HULBERT AND BRIGGS **17**, 685.

Distal chromosome 7
Towards unravelling the *Igf2/H19* imprinted domain: VIVILLE AND SURANI **17**, 835.

DNA
Eukaryotic DNA methyltransferases – structure and function: ADAMS **17**, 139.
Is there a unique form of chromatin at the *Saccharomyces cerevisiae* centromeres?: BASRAI AND HIETER **17**, 669.
Nucleosomal anatomy – where are the histones?: PRUSS, HAYES AND WOLFFE **17**, 161.
Structure and function of apurinic/apyrimidinic endonucleases: BARZILAY AND HICKSON **17**, 713.
The specificity of homeotic gene function: MANN **17**, 855.

DNA damage
Alkylation of DNA and its aftermath: LAWLEY **17**, 561.
Are there DNA damage checkpoints in *E. coli*?: BRIDGES **17**, 63.
Histone H4: TURNER **17**, 1013.
Origins of G_1 arrest in senescent human fibroblasts: STEIN AND DULIC **17**, 537.
Tumour suppressors, kinases and clamps: how p53 regulates the cell cycle in response to DNA damage: COX AND LANE **17**, 501.

DNA degradation
Instability of inhibited replication forks in *E. coli*: KUZMINOV **17**, 733.

DNA double-strand breaks
A model for repair of radiation-induced DNA double-strand breaks in the extreme radiophile *Deinococcus radiodurans*: MINTON AND DALY **17**, 457.

DNA metabolism
Stopped for repairs: SANCHEZ AND ELLEDGE **17**, 545.

DNA methyltransferases
Eukaryotic DNA methyltransferases – structure and function: ADAMS **17**, 139.

DNA organization
The channels model of nuclear matrix structure: RAZIN AND GROMOVA **17**, 443.

DNA repair
A model for repair of radiation-induced DNA double-strand breaks in the extreme radiophile *Deinococcus radiodurans*: MINTON AND DALY **17**, 457.
Menage à trois: double strand break repair, V(D)J recombination and DNA-PK: JEGGO, TACCIOLI AND JACKSON **17**, 949.
Microsatellite instability and a TGF-β receptor: clues to a growth control pathway: BENSON AND WELLS **17**, 1009.

DNA replication
G_1 regulation and checkpoints operating around START in fission yeast: WOOLLARD AND NURSE **17**, 481.
Nuclear organization: uniting replication foci, chromatin domains and chromosome structure: JACKSON **17**, 587.

DNA topoisomerase II
DNA topoisomerase II mutations and resistance to anti-tumor drugs: VASSETZKY, ALGHISI AND GASSER **17**, 767.
The SMC proteins and the coming of age of the chromosome scaffold hypothesis: SAITOH, GOLDBERG AND EARNSHAW **17**, 759.

DNA translocation chromosome
DNA packaging and cutting by phage terminases: control in phage T4 by a synaptic mechanism: BLACK **17**, 1025.

DNA-dependent protein kinase
Menage à trois: double strand break repair, V(D)J recombination and DNA-PK: JEGGO, TACCIOLI AND JACKSON **17**, 949.

DnaA protein
Overview of controls in the *Escherichia coli* cell cycle: VINELLA AND D'ARI **17**, 527.

Domains: ATP-binding
DNA topoisomerase II mutations and resistance to anti-tumor drugs: VASSETZKY, ALGHISI AND GASSER **17**, 767.

Dorsal-ventral polarity
How many signals does it take?: VENKATESH AND BODMER **17**, 754.
The anterior-posterior and dorsal-ventral axes have a common origin in *Drosophila melanogaster*: MUNN AND STEWARD **17**, 920.

Dose-effect model
UV-induced skin cancer in a hairless mouse model: DE GRUIJL AND FORBES **17**, 651.

Double-strand breaks
Menage à trois: double strand break repair, V(D)J recombination and DNA-PK: JEGGO, TACCIOLI AND JACKSON **17**, 949.

Down's syndrome
Physiological and pathological interrelationships of amyloid B peptide and the amyloid precursor protein: LARNER **17**, 819.

Drosophila melanogaster
Are competing intermolecular and intramolecular interactions of PERIOD protein important for the regulation of circadian rhythms in *Drosophila* ?: PRICE **17**, 583.
Axes, boundaries and coordinates: the ABCs of fly leg development: HELD JR. **17**, 721.
Cell-cell signalling, microtubule organization and RNA localization: is PKA a link?: LASKO **17**, 105.
Compartments and appendage development in *Drosophila*: BLAIR **17**, 299.
Drosophila WARTS – tumor suppressor and member of the myotonic dystrophy protein kinase family: WATSON **17**, 673.
Drosophila development pulls the strings of the cell cycle: REED **17**, 553.
How many receptors does it take?: WHARTON **17**, 13.
How many signals does it take?: VENKATESH AND BODMER **17**, 754.
Morphogens in vertebrate development: how do they work?: COOKE **17**, 93.
Moving up the hierarchy: A hypothesis on the evolution of a genetic sex determination pathway: WILKINS **17**, 71.
Singling out the distal tip cell of the Malpighian tubules – lessons from neurogenesis: WILKINS **17**, 199.
Tag team specification of a neural precursor in the *Drosophila* embryonic central nervous system: SKEATH **17**, 829.
The anterior-posterior and dorsal-ventral axes have a common origin in *Drosophila melanogaster*: MUNN AND STEWARD **17**, 920.
The dynamics of cytosolic calcium in photoreceptor cells: WILLIAMS **17**, 282.
The making of a fly leg: a model for epithelial morphogenesis: VON KALM, FRISTROM AND FRISTROM **17**, 693.
The specificity of homeotic gene function: MANN **17**, 855.
Transcriptional silencing of homeotic genes in *Drosophila*: BIENZ AND MÜLLER **17**, 775.

Drug design
Giant leap for p53, small step for drug design: ANDERSON AND TEGTMEYER **17**, 3.

Drug target
DNA topoisomerase II mutations and resistance to anti-tumor drugs: VASSETZKY, ALGHISI AND GASSER **17**, 767.

Ductin
Ductin – a proton pump component, a gap junction channel and a neurotransmitter release channel: FINBOW, HARRISON AND JONES **17**, 247.

Dynein
Ciliogenesis in sea urchin embryos – a subroutine in the program of development: STEPHENS **17**, 331.
Keeping the beat: form meets function in the *Chlamydomonas* flagellum: JOHNSON **17**, 847.

E-cadherin
E-cadherin as a tumor (invasion) suppressor gene: BIRCHMEIER **17**, 97.

E6, E7
Human Papillomavirus E6 and E7: proteins which deregulate the cell cycle: TOMMASINO AND CRAWFORD **17**, 509.
Ecdysone
The making of a fly leg: a model for epithelial morphogenesis: VON KALM, FRISTROM AND FRISTROM **17**, 693.
eIF-3
Protein synthesis in eukaryotic organisms: new insights into the function of translation initiation factor eIF-3: HANNIG **17**, 915.
Embryonic cells
The initiation of senescence and its relationship to embryonic cell differentiation: ROSENBERGER **17**, 257.
Embryonic central nervous system
Tag team specification of a neural precursor in the *Drosophila* embryonic central nervous system: SKEATH **17**, 829.
Endosperm
Pattern and process of wall formation in developing endosperm: OLSEN, LEMMON AND BROWN **17**, 803.
Enhancers
A unique role for enhancers is revealed during early mouse development: MAJUMDER AND DEPAMPHILIS **17**, 881.
***ENOD40* genes**
Surprising developments in the legume root nodule: COOK **17**, 191.
Enzymes
A radical approach to enzyme catalysis: MARSH **17**, 431.
Epiboly
Transparent things: cell fates and cell movements during early embryogenesis of zebrafish: SOLNICA-KREZEL, STEMPLE AND DRIEVER **17**, 931.
Epidemiology
UV-induced skin cancer in a hairless mouse model: DE GRUIJL AND FORBES **17**, 651.
Epidermal development
Two ways to skin a plant: the analysis of root and shoot epidermal development in *Arabidopsis*: DOLAN AND ROBERTS **17**, 865.
Epidermal growth factor
Signaling, mitogenesis and the cytoskeleton: where the action is: CARRAWAY AND CARRAWAY **17**, 171.
Epidermal growth factor (EPG) receptor
Epidermal growth factor receptor function in early mammalian development: WILEY, ADAMSON AND TSARK **17**, 839.
Epithelial cells
Epidermal growth factor receptor function in early mammalian development: WILEY, ADAMSON AND TSARK **17**, 839.
Microsatellite instability and a TGF-β receptor: clues to a growth control pathway: BENSON AND WELLS **17**, 1009.
Regulation of protein traffic in polarized epithelial cells: MOSTOV AND CARDONE **17**, 129.
The making of a fly leg: a model for epithelial morphogenesis: VON KALM, FRISTROM AND FRISTROM **17**, 693.
Escherichia coli
Are there DNA damage checkpoints in *E. coli*?: BRIDGES **17**, 63.
Cell shape and chromosome partition in prokaryotes or, Why *E. coli* is rod-shaped and haploid: DONACHIE, ADDINALL AND BEGG **17**, 569.
Does replication-induced transcription regulate synthesis of the myriad low copy number proteins of *Escherichia coli*?: GUPTASARMA **17**, 987.
Genetic control of intrachromosomal recombination: KLEIN **17**, 147.
Instability of inhibited replication forks in *E. coli*: KUZMINOV **17**, 733.
Overview of controls in the *Escherichia coli* cell cycle: VINELLA AND D'ARI **17**, 527.
Recombination, mutation and the origin of species: COX **17**, 747.
Ethylene
Ethylene: a tiny molecule with great potential: WOLTERING AND DE VRIJE **17**, 287.
Eukaryotic genome
The channels model of nuclear matrix structure: RAZIN AND GROMOVA **17**, 443.
Evolution
A radical approach to enzyme catalysis: MARSH **17**, 431.
Fractious chromosomes: hybrid disruption and the origin of selfish genetic elements: MCVEAN **17**, 579.
Moving up the hierarchy: A hypothesis on the evolution of a genetic sex determination pathway: WILKINS **17**, 71.
Multi-allelic self-incompatibility polymorphisms in plants: CHARLESWORTH **17**, 31.
Recombination, mutation and the origin of species: COX **17**, 747.
The origin and function of the mammalian Y chromosome and Y-borne genes – an evolving understanding: MARSHALL GRAVES **17**, 311.
Excision repair (of DNA)
Stopped for repairs: SANCHEZ AND ELLEDGE **17**, 545.
Extracellular matrix
Signal transduction through integrins: a central role for focal adhesion?: RICHARDSON AND PARSONS **17**, 229.
Extradenticle (exd)
The specificity of homeotic gene function: MANN **17**, 855.
Fas/FasL
Dual mechanisms of lymphocyte-mediated cytotoxicity serve to control and deliver the immune response: SMYTH **17**, 891.
Fate map
Transparent things: cell fates and cell movements during early embryogenesis of zebrafish: SOLNICA-KREZEL, STEMPLE AND DRIEVER **17**, 931.
Fertilisation
Gamete and immune cell recognition revisited: BELTON AND FOLTZ **17**, 1075.
Fibroblasts
Origins of G_1 arrest in senescent human fibroblasts: STEIN AND DULIC **17**, 537.
The complexity in regulating the expression of tenascins: CHIQUET-EHRISMANN, HAGIOS AND SCHENK **17**, 873.
Fibronectin
The complexity in regulating the expression of tenascins: CHIQUET-EHRISMANN, HAGIOS AND SCHENK **17**, 873.
Filament coupling sites
Structure-function relationships in smooth muscle: the missing links: SMALL **17**, 785.
Fission yeast
G_1 regulation and checkpoints operating around START in fission yeast: WOOLLARD AND NURSE **17**, 481.
Flagellum
Keeping the beat: form meets function in the *Chlamydomonas* flagellum: JOHNSON **17**, 847.
Floral development
Does Flo flow? Cell layer interactions during floral development: SZYMKOWIAK **17**, 387.
Fly leg
Axes, boundaries and coordinates: the ABCs of fly leg development: HELD JR. **17**, 721.
The making of a fly leg: a model for epithelial morphogenesis: VON KALM, FRISTROM AND FRISTROM **17**, 693.
FMR1
A fragile gene: OOSTRA AND WILLEMS **17**, 941.
Focal adhesion kinase
Signal transduction through integrins: a central role for focal adhesion?: RICHARDSON AND PARSONS **17**, 229.
Focal contacts
Signal transduction through integrins: a central role for focal adhesion?: RICHARDSON AND PARSONS **17**, 229.
Fragile X syndrome
A fragile gene: OOSTRA AND WILLEMS **17**, 941.
Frequency-dependent selection
Moving up the hierarchy: A hypothesis on the evolution of a genetic sex determination pathway: WILKINS **17**, 71.
FtsA protein
Overview of controls in the *Escherichia coli* cell cycle: VINELLA AND D'ARI **17**, 527.
FtsH
A 200-amino acid – ATPase module in search of a basic function: CONFALONIERI AND DUGUET **17**, 639.
Functional diversity
A 200-amino acid – ATPase module in search of a basic function: CONFALONIERI AND DUGUET **17**, 639.
G_1 regulation
G_1 regulation and checkpoints operating around START in fission yeast: WOOLLARD AND NURSE **17**, 481.
Origins of G_1 arrest in senescent human fibroblasts: STEIN AND DULIC **17**, 537.
Gadd45
Stopped for repairs: SANCHEZ AND ELLEDGE **17**, 545.
Gain-of-function mutations
Disease lesion mimics of maize: a model for cell death in plants: JOHAL, HULBERT AND BRIGGS **17**, 685.
Gametes
Gamete and immune cell recognition revisited: BELTON AND FOLTZ **17**, 1075.
Gamma tubulin
The formation and functioning of yeast mitotic spindles: MASUDA **17**, 45.
Gap junction channel
Ductin – a proton pump component, a gap junction channel and a neurotransmitter release channel: FINBOW, HARRISON AND JONES **17**, 247.
Gastric carcinoma
E-cadherin as a tumor (invasion) suppressor gene: BIRCHMEIER **17**, 97.
Gastrulation
Transparent things: cell fates and cell movements during early embryogenesis of

zebrafish: SOLNICA-KREZEL, STEMPLE AND DRIEVER **17**, 931.
Gecko
The dynamics of cytosolic calcium in photoreceptor cells: WILLIAMS **17**, 282.
Gene amplification
DNA packaging and cutting by phage terminases: control in phage T4 by a synaptic mechanism: BLACK **17**, 1025.
Gene clusters
The genetics of lantibiotic biosynthesis: JACK, BIERBAUM, HEIDRICH AND SAHL **17**, 793.
Gene conversions
Genetic control of intrachromosomal recombination: KLEIN **17**, 147.
In vivo biochemistry: physical monitoring of recombination induced by site-specific endonucleases: HABER **17**, 609.
Gene deletions
Genetic control of intrachromosomal recombination: KLEIN **17**, 147.
Gene expression
A role for Y-box proteins in cell proliferation: LADOMERY AND SOMMERVILLE **17**, 9.
Axes, boundaries and coordinates: the ABCs of fly leg development: HELD JR. **17**, 721.
bcl-2, a novel regulator of cell death: HOCKENBERY **17**, 631.
Development, databases and the internet: BARD AND DAVIES **17**, 999.
Ethylene: a tiny molecule with great potential: WOLTERING AND DE VRIJE **17**, 287.
Eukaryotic DNA methyltransferases – structure and function: ADAMS **17**, 139.
Modulation of AP-1/ATF transcription factor activity by the adenovirus-E1A oncogene products: HAGMEYER, ANGEL AND VAN DAM **17**, 621.
Regulation of vertebrate muscle differentiation by thyroid hormone: the role of the *myoD* gene family: MUSCAT, DOWNES AND DOWNHAN **17**, 211.
The therapeutic potential of antisense oligodeoxynucleotides: SHARMA AND NARAYANAN **17**, 1055.
Gene knockout
Towards unravelling the *Igf2/H19* imprinted domain: VIVILLE AND SURANI **17**, 835.
Gene order
Does replication-induced transcription regulate synthesis of the myriad low copy number proteins of *Escherichia coli*?: GUPTASARMA **17**, 987.
Gene regulation
Inflammation, reproduction, cancer and all that...The regulation and role of the inducible prostaglandin synthase: HERSCHMAN, XIE AND REDDY **17**, 1031
Gene structure mutations
The chondrocyte, architect of cartilage: MUIR **17**, 1039.
Gene therapy
Life and death by p53: ELLEDGE AND LEE **17**, 923.
Gene transcription
Nuclear/growth factors: PROCHIANTZ AND THÉODORE **17**, 39.
Gene transfer system
c-fos and bone loss: a proto-oncogene regulates osteoclast lineage determination: JACENKO **17**, 277.
General control
Protein synthesis in eukaryotic organisms: new insights in:to the function of translation initiation factor eIF-3: HANNIG **17**, 915.
Genetic switches
Moving up the hierarchy: A hypothesis on the evolution of a genetic sex determination pathway: WILKINS **17**, 71.
Genetic totipotency
The initiation of senescence and its relationship to embryonic cell differentiation: ROSENBERGER **17**, 257.
Genomic imprinting
Sex determination in Hymenoptera: a need for genetic and molecular studies: BEUKEBOOM **17**, 813.
Towards unravelling the *Igf2/H19* imprinted domain: VIVILLE AND SURANI **17**, 835.
Geometry
Axes, boundaries and coordinates: the ABCs of fly leg development: HELD JR. **17**, 721.
Germinal zone
Precursor cell types in the germinal zone of the cerebral cortex: WILLIAMS **17**, 391.
glp-1
Determinants of blastomere identity in the early *C. elegans* embryo: BOWERMAN **17**, 405.
Golgi
Biological consequences of targeting β1,4-galactosyltransferase to two different subcellular compartments: EVANS, YOUAKIM AND SHUR **17**, 261.
Regulation of protein traffic in polarized epithelial cells: MOSTOV AND CARDONE **17**, 129.
Gradients
Morphogens in vertebrate development: how do they work?: COOKE **17**, 93.
Gram-positive bacteria
The genetics of lantibiotic biosynthesis: JACK, BIERBAUM, HEIDRICH AND SAHL **17**, 793.
Granule exocytosis
Dual mechanisms of lymphocyte-mediated cytotoxicity serve to control and deliver the immune response: SMYTH **17**, 891.
Granzyme
Dual mechanisms of lymphocyte-mediated cytotoxicity serve to control and deliver the immune response: SMYTH **17**, 891.
Gravitropism
Root gravitropism: MASSON **17**, 119.
Growth factors
Calcium signalling and cell proliferation: BERRIDGE **17**, 491.
Nuclear/growth factors: PROCHIANTZ AND THÉODORE **17**, 39.
Growth inhibitory pathways
Microsatellite instability and a TGF-β receptor: clues to a growth control pathway: BENSON AND WELLS **17**, 1009.
Growth-associated genes
A role for Y-box proteins in cell proliferation: LADOMERY AND SOMMERVILLE **17**, 9.
Guanine nucleotide exchange factors (GEFS)
Guanine nucleotide exchange factors: activators of the Ras superfamily of proteins: QUILLIAM, KHOSRAVI-FAR, HUFF AND DER **17**, 395.
Guard cell
Two ways to skin a plant: the analysis of root and shoot epidermal development in *Arabidopsis*: DOLAN AND ROBERTS **17**, 865.
Haemopoiesis/hemopoiesis
Myb: an old oncoprotein with new roles: THOMPSON AND RAMSAY **17**, 341.
Retinoic acid and the differentiation of lymphohaemopoietic stem cells: GÖTTGENS AND GREEN **17**, 187.
Hairless mouse model
UV-induced skin cancer in a hairless mouse model: DE GRUIJL AND FORBES **17**, 651.
Haplodiploidy
Sex determination in Hymenoptera: a need for genetic and molecular studies: BEUKEBOOM **17**, 813.
Heat shock elements
Stress signaling in yeast: RUIS AND SCHÜLLER **17**, 959.
HeLa cells
Cell death suffers a TKO: OSBORNE AND SCHWARTZ **17**, 557.
Helper virus
The cryptic life style of adeno-associated virus: BERNS AND LINDEN **17**, 237.
Hemoglobin
The enigmatic oxygen-avid hemoglobin of *Ascaris*: GOLDBERG **17**, 177.
Histone acetylation
Histone H4: TURNER **17**, 1013.
Trichostatin A and trapoxin: novel chemical probes for the role of histone acetylation in chromatin structure and function: YOSHIDA, HORINOUCHI AND BEPPU **17**, 423.
Histones
Histone H4: TURNER **17**, 1013.
Is there a unique form of chromatin at the *Saccharomyces cerevisiae* centromeres?: BASRAI AND HIETER **17**, 669.
Nucleosomal anatomy – where are the histones?: PRUSS, HAYES AND WOLFFE **17**, 161.
HOG signal pathway
Stress signaling in yeast: RUIS AND SCHÜLLER **17**, 959.
Holliday junctions
A model for repair of radiation-induced DNA double-strand breaks in the extreme radiophile *Deinococcus radiodurans*: MINTON AND DALY **17**, 457.
HOM/Hox genes and proteins
MHox and vertebrate skeletogenesis: the long and the short of it: BRICKELL **17**, 750.
The specificity of homeotic gene function: MANN **17**, 855.
Transformations in null mutants of Hox genes: do they represent intercalary regenerates?: CRAWFORD **17**, 1065.
Homeodomain
The specificity of homeotic gene function: MANN **17**, 855.
Homeostasis
Regulation of protein traffic in polarized epithelial cells: MOSTOV AND CARDONE **17**, 129.
The macrophage: GORDON **17**, 977.
Ubiquitin in homeostasis, development and disease: MULLER AND SCHWARTZ **17**, 677.
Homeotic genes
Transcriptional silencing of homeotic genes in *Drosophila*: BIENZ AND MÜLLER **17**, 775.
The specificity of homeotic gene function: MANN **17**, 855.

Horizontal gene transfer
Rubisco rules fall; gene transfer triumphs: PALMER **17**, 1005.
Human
Cytomegalovirus and atherosclerosis: MELNICK, ADAM AND DEBAKEY **17**, 899.
Giant leap for p53, small step for drug design: ANDERSON AND TEGTMEYER **17**, 3.
Ubiquitin in homeostasis, development and disease: MULLER AND SCHWARTZ **17**, 677.
Human adenoviruses
Modulation of AP-1/ATF transcription factor activity by the adenovirus-E1A oncogene products: HAGMEYER, ANGEL AND VAN DAM **17**, 621.
Human carcinogenesis
UV-induced skin cancer in a hairless mouse model: DE GRUIJL AND FORBES **17**, 651.
Human fibroblasts
Origins of G_1 arrest in senescent human fibroblasts: STEIN AND DULIC **17**, 537.
Human papillomaviruses (HPV)
Human Papillomavirus E6 and E7: proteins which deregulate the cell cycle: TOMMASINO AND CRAWFORD **17**, 509.
Human tumour suppressor protein
Tumour suppressors, kinases and clamps: how p53 regulates the cell cycle in response to DNA damage: COX AND LANE **17**, 501.
Hydra
The cnidarian cnidocyte, a high-tech cellular weaponry: TARDENT **17**, 351.
Hymenoptera
Sex determination in Hymenoptera: a need for genetic and molecular studies: BEUKEBOOM **17**, 813.
Igf2/H19
Towards unravelling the *Igf2/H19* imprinted domain: VIVILLE AND SURANI **17**, 835.
Immune and nervous system diseases
Ubiquitin in homeostasis, development and disease: MULLER AND SCHWARTZ **17**, 677.
Immune cells
Gamete and immune cell recognition revisited: BELTON AND FOLTZ **17**, 1075.
Immune response
Dual mechanisms of lymphocyte-mediated cytotoxicity serve to control and deliver the immune response: SMYTH **17**, 891.
Immunization
Cytomegalovirus and atherosclerosis: MELNICK, ADAM AND DEBAKEY **17**, 899.
Infection
Phagocytosis: BROWN **17**, 109.
The cryptic life style of adeno-associated virus: BERNS AND LINDEN **17**, 237.
Inflammation
Inflammation, reproduction, cancer and all that...The regulation and role of the inducible prostaglandin synthase: HERSCHMAN, XIE AND REDDY **17**, 1031
Phagocytosis: BROWN **17**, 109.
Inositol triphosphate
Calcium signalling and cell proliferation: BERRIDGE **17**, 491.
Integrins
Signal transduction through integrins: a central role for focal adhesion?: RICHARDSON AND PARSONS **17**, 229.
Intercellular communication
The significances of bacterial colony patterns: SHAPIRO **17**, 597.
Internet
Development, databases and the internet: BARD AND DAVIES **17**, 999.
Intrachromosomal recombination
Genetic control of intrachromosomal recombination: KLEIN **17**, 147.
Ionising radiation
Menage à trois: double strand break repair, V(D)J recombination and DNA-PK: JEGGO, TACCIOLI AND JACKSON **17**, 949.
Ionizing radiation
A model for repair of radiation-induced DNA double-strand breaks in the extreme radiophile *Deinococcus radiodurans*: MINTON AND DALY **17**, 457.
Isoforms
Biological consequences of targeting β1,4-galactosyltransferase to two different subcellular compartments: EVANS, YOUAKIM AND SHUR **17**, 261.
Nuclear/growth factors: PROCHIANTZ AND THÉODORE **17**, 39.
Isomerisation
A radical approach to enzyme catalysis: MARSH **17**, 431.
Kinetochore
Chromosomes take an active role in spindle assembly: WATERS AND SALMON **17**, 911.
Lantibiotics
The genetics of lantibiotic biosynthesis: JACK, BIERBAUM, HEIDRICH AND SAHL **17**, 793.
Latent
The cryptic life style of adeno-associated virus: BERNS AND LINDEN **17**, 237.
Left-right asymmetry
Left-right asymmetry in vertebrates: ALMIRANTIS **17**, 79.
Legume
Surprising developments in the legume root nodule: COOK **17**, 191.
Life history
Model systems in developmental biology: BOLKER **17**, 451.
LIM family homeobox genes
Specifying the target identity of motoneurons: TOSNEY, HOTARY AND LANCE-JONES **17**, 379.
Lineage determination
c-fos and bone loss: a proto-oncogene regulates osteoclast lineage determination: JACENKO **17**, 277.
Linker histones
Nucleosomal anatomy – where are the histones?: PRUSS, HAYES AND WOLFFE **17**, 161.
Lipid bilayer
Membrane protein assembly: Rules of the game: VON HEIJNE **17**, 25.
Liposomes
Surrogate cells or Trojan horses: BANGHAM **17**, 1075.
Low copy number proteins
Does replication-induced transcription regulate synthesis of the myriad low copy number proteins of *Escherichia coli*?: GUPTASARMA **17**, 987.
Lymphocyte
Dual mechanisms of lymphocyte-mediated cytotoxicity serve to control and deliver the immune response: SMYTH **17**, 891.
Lymphohaemopoietic stem cells
Retinoic acid and the differentiation of lymphohaemopoietic stem cells: GÖTTGENS AND GREEN **17**, 187.
Lymphohemopoiesis
CD44 isoforms during differentiation and development: RUIZ, SCHWARZLER AND GÜNTHERT **17**, 17.
Macrophage
The macrophage: GORDON **17**, 977.
Maize
Disease lesion mimics of maize: a model for cell death in plants: JOHAL, HULBERT AND BRIGGS **17**, 685.
Epigenetic regulation of the maize *Spm* transposon: FEDOROFF, SCHLÄPPI AND RAINA **17**, 291.
Male sex-determination
The origin and function of the mammalian Y chromosome and Y-borne genes – an evolving understanding: MARSHALL GRAVES **17**, 311.
Malignant tissues
Myb: an old oncoprotein with new roles: THOMPSON AND RAMSAY **17**, 341.
Malignant transformation
Guanine nucleotide exchange factors: activators of the Ras superfamily of proteins: QUILLIAM, KHOSRAVI-FAR, HUFF AND DER **17**, 395.
Human Papillomavirus E6 and E7: proteins which deregulate the cell cycle: TOMMASINO AND CRAWFORD **17**, 509.
Malpighian tubules
Singling out the distal tip cell of the Malpighian tubules – lessons from neurogenesis: WILKINS **17**, 199.
Mammals
The origin and function of the mammalian Y chromosome and Y-borne genes – an evolving understanding: MARSHALL GRAVES **17**, 311.
MAP kinase cascade
Signaling, mitogenesis and the cytoskeleton: where the action is: CARRAWAY AND CARRAWAY **17**, 171.
Mechanism of anaesthesia
Surrogate cells or Trojan horses: BANGHAM **17**, 1075.
Mediatophore
Ductin – a proton pump component, a gap junction channel and a neurotransmitter release channel: FINBOW, HARRISON AND JONES **17**, 247.
***Medicago* spp**
Surprising developments in the legume root nodule: COOK **17**, 191.
Meinhardt's boundary model
Axes, boundaries and coordinates: the ABCs of fly leg development: HELD JR. **17**, 721.
Meiosis
The initiation of senescence and its relationship to embryonic cell differentiation: ROSENBERGER **17**, 257.
Melanoma
Melanoma formation in Xiphophorus: a model system for the role of receptor tyrosine kinases in tumorigenesis: MALITSCHEK, FÖRNZLER AND SCHARTL **17**, 1017.
Membrane structure
Ciliogenesis in sea urchin embryos – a

subroutine in the program of development: STEPHENS **17**, 331.
Membrane protein assembly: Rules of the game: VON HEIJNE **17**, 25.
Signaling, mitogenesis and the cytoskeleton: where the action is: CARRAWAY AND CARRAWAY **17**, 171.
Mental retardation
A fragile gene: OOSTRA AND WILLEMS **17**, 941.
Meristems
Does Flo flow? Cell layer interactions during floral development: SZYMKOWIAK **17**, 387.
Two ways to skin a plant: the analysis of root and shoot epidermal development in *Arabidopsis*: DOLAN AND ROBERTS **17**, 865.
Mesoderm
How many signals does it take?: VENKATESH AND BODMER **17**, 754.
Methylation
Epigenetic regulation of the maize *Spm* transposon: FEDOROFF, SCHLÄPPI AND RAINA **17**, 291.
Eukaryotic DNA methyltransferases – structure and function: ADAMS **17**, 139.
Micromanipulation
Chromosomes take an active role in spindle assembly: WATERS AND SALMON **17**, 911.
Microsatellite instability
Microsatellite instability and a TGF-β receptor: clues to a growth control pathway: BENSON AND WELLS **17**, 1009.
Microtubules
Cell-cell signalling, microtubule organization and RNA localization: is PKA a link?: LASKO **17**, 105.
Chromosomes take an active role in spindle assembly: WATERS AND SALMON **17**, 911.
Keeping the beat: form meets function in the *Chlamydomonas* flagellum: JOHNSON **17**, 847.
Pattern and process of wall formation in developing endosperm: OLSEN, LEMMON AND BROWN **17**, 803.
The formation and functioning of yeast mitotic spindles: MASUDA **17**, 45.
Minichromosomes
Fractious chromosomes: hybrid disruption and the origin of selfish genetic elements: MCVEAN **17**, 579.
Mismatch correction system
Recombination, mutation and the origin of species: COX **17**, 747.
Mitogenesis
Signaling, mitogenesis and the cytoskeleton: where the action is: CARRAWAY AND CARRAWAY **17**, 171.
Mitogenic signals
Calcium signalling and cell proliferation: BERRIDGE **17**, 491.
Mitotic spindle
Frontier questions about sister chromatid separation in anaphase: YANAGIDA **17**, 519.
The formation and functioning of yeast mitotic spindles: MASUDA **17**, 45.
Model systems
Model systems in developmental biology: BOLKER **17**, 451.
Molecular interactions
Are competing intermolecular and intramolecular interactions of PERIOD protein important for the regulation of circadian rhythms in *Drosophila*?: PRICE **17**, 583.
Molecular mechanisms of PKD
Animal models of polycystic kidney disease: AZIZ **17**, 703.
Molecular recognition
Gamete and immune cell recognition revisited: BELTON AND FOLTZ **17**, 1075.
Molecular therapeutics
The therapeutic potential of antisense oligodeoxynucleotides: SHARMA AND NARAYANAN **17**, 1055.
Morphogenesis
Morphogens in vertebrate development: how do they work?: COOKE **17**, 93.
Surprising developments in the legume root nodule: COOK **17**, 191.
The significances of bacterial colony patterns: SHAPIRO **17**, 597.
Transparent things: cell fates and cell movements during early embryogenesis of zebrafish: SOLNICA-KREZEL, STEMPLE AND DRIEVER **17**, 931.
Motoneurons
Specifying the target identity of motoneurons: TOSNEY, HOTARY AND LANCE-JONES **17**, 379.
Mouse
A unique role for enhancers is revealed during early mouse development: MAJUMDER AND DEPAMPHILIS **17**, 881.
CD44 isoforms during differentiation and development: RUIZ, SCHWARZLER AND GÜNTHERT **17**, 17.
Epidermal growth factor receptor function in early mammalian development: WILEY, ADAMSON AND TSARK **17**, 839.
Reelin: a novel extracellular matrix protein involved in brain lamination: RUGARLI AND BALLABIO **17**, 832.
Mouse models
Steps towards a mouse model of Alzheimer's disease: CROWTHER **17**, 593.
MukB protein
Overview of controls in the *Escherichia coli* cell cycle: VINELLA AND D'ARI **17**, 527.
Multicellularity
The significances of bacterial colony patterns: SHAPIRO **17**, 597.
Multigenetic disorder
Animal models of polycystic kidney disease: AZIZ **17**, 703.
Multiple genes
The genetics of lantibiotic biosynthesis: JACK, BIERBAUM, HEIDRICH AND SAHL **17**, 793.
Muscle
MyoD and myogenesis in *C. elegans*: KRAUSE **17**, 219.
Mustard gases
Alkylation of DNA and its aftermath: LAWLEY **17**, 561.
Mutants
Disease lesion mimics of maize: a model for cell death in plants: JOHAL, HULBERT AND BRIGGS **17**, 685.
Mutation
DNA topoisomerase II mutations and resistance to anti-tumor drugs: VASSETZKY, ALGHISI AND GASSER **17**, 767.
Multi-allelic self-incompatibility polymorphisms in plants: CHARLESWORTH **17**, 31.
Transformations in null mutants of Hox genes: do they represent intercalary regenerates?: CRAWFORD **17**, 1065.
Two ways to skin a plant: the analysis of root and shoot epidermal development in *Arabidopsis*: DOLAN AND ROBERTS **17**, 865.
Myb
Myb: an old oncoprotein with new roles: THOMPSON AND RAMSAY **17**, 341.
MyoD family
MyoD and myogenesis in *C. elegans*: KRAUSE **17**, 219.
Regulation of vertebrate muscle differentiation by thyroid hormone: the role of the *myoD* gene family: MUSCAT, DOWNES AND DOWNHAN **17**, 211.
The MyoD family of transcription factors and skeletal myogenesis: RUDNICKI AND JAENISCH **17**, 203.
Myogenesis
MyoD and myogenesis in *C. elegans*: KRAUSE **17**, 219.
The MyoD family of transcription factors and skeletal myogenesis: RUDNICKI AND JAENISCH **17**, 203.
Myotonic dystrophy protein kinase family
Drosophila WARTS – tumor suppressor and member of the myotonic dystrophy protein kinase family: WATSON **17**, 673.
Myotubes
The MyoD family of transcription factors and skeletal myogenesis: RUDNICKI AND JAENISCH **17**, 203.
Neoplastic development
Microsatellite instability and a TGF-β receptor: clues to a growth control pathway: BENSON AND WELLS **17**, 1009.
Neural diversity
Tag team specification of a neural precursor in the *Drosophila* embryonic central nervous system: SKEATH **17**, 829.
Neural stem cell lineages
Tag team specification of a neural precursor in the *Drosophila* embryonic central nervous system: SKEATH **17**, 829.
Neuroblasts
Singling out the distal tip cell of the Malpighian tubules – lessons from neurogenesis: WILKINS **17**, 199.
Neurogenesis
Singling out the distal tip cell of the Malpighian tubules – lessons from neurogenesis: WILKINS **17**, 199.
Neuronal migration
Reelin: a novel extracellular matrix protein involved in brain lamination: RUGARLI AND BALLABIO **17**, 832.
Neurons
Physiological and pathological interrelationships of amyloid β peptide and the amyloid precursor protein: LARNER **17**, 819.
Neurotransmitter
Ductin – a proton pump component, a gap junction channel and a neurotransmitter release channel: FINBOW, HARRISON AND JONES **17**, 247.
***nm23* gene**
Nm23/nucleoside diphosphate kinase: Toward a structural and biochemical understanding

of its biological functions: DE LA ROSA, WILLIAMS AND STEEG **17**, 53.
Nodule
Surprising developments in the legume root nodule: COOK **17**, 191.
Non-clonal populations
The significances of bacterial colony patterns: SHAPIRO **17**, 597.
Non-muscle myosin II
The making of a fly leg: a model for epithelial morphogenesis: VON KALM, FRISTROM AND FRISTROM **17**, 693.
Nuclear organization
Nuclear organization: uniting replication foci, chromatin domains and chromosome structure: JACKSON **17**, 587.
The channels model of nuclear matrix structure: RAZIN AND GROMOVA **17**, 443.
Nucleoside diphosphate kinase
Nm23/nucleoside diphosphate kinase: Toward a structural and biochemical understanding of its biological functions: DE LA ROSA, WILLIAMS AND STEEG **17**, 53.
Nucleosomes
Nucleosomal anatomy – where are the histones?: PRUSS, HAYES AND WOLFFE **17**, 161.
Nucleus
Out-of body experiences: cell-free cell death: HENGARTNER **17**, 549.
Octamer
The enigmatic oxygen-avid hemoglobin of *Ascaris*: GOLDBERG **17**, 177.
Oncogenesis
Cyclin-dependent protein kinases: key regulators of the eukaryotic cell cycle: NIGG **17**, 471.
Melanoma formation in Xiphophorus: a model system for the role of receptor tyrosine kinases in tumorigenesis: MALITSCHEK, FÖRNZLER AND SCHARTL **17**, 1017.
Modulation of AP-1/ATF transcription factor activity by the adenovirus-E1A oncogene products: HAGMEYER, ANGEL AND VAN DAM **17**, 621.
Oocyte
Cell-cell signalling, microtubule organization and RNA localization: is PKA a link?: LASKO **17**, 105.
Oogenesis
The anterior-posterior and dorsal-ventral axes have a common origin in *Drosophila melanogaster*: MUNN AND STEWARD **17**, 920.
Organogenesis
The complexity in regulating the expression of tenascins: CHIQUET-EHRISMANN, HAGIOS AND SCHENK **17**, 873.
Osmotic pressure
The cnidarian cnidocyte, a high-tech cellular weaponry: TARDENT **17**, 351.
Osteoclast
c-fos and bone loss: a proto-oncogene regulates osteoclast lineage determination: JACENKO **17**, 277.
Oxidative stress
bcl-2, a novel regulator of cell death: HOCKENBERY **17**, 631.
Oxygen avidity
The enigmatic oxygen-avid hemoglobin of *Ascaris*: GOLDBERG **17**, 177.
p21
Origins of G_1 arrest in senescent human fibroblasts: STEIN AND DULIC **17**, 537.
Tumour suppressors, kinases and clamps: how p53 regulates the cell cycle in response to DNA damage: COX AND LANE **17**, 501.
p300
Modulation of AP-1/ATF transcription factor activity by the adenovirus-E1A oncogene products: HAGMEYER, ANGEL AND VAN DAM **17**, 621.
p53
Giant leap for p53, small step for drug design: ANDERSON AND TEGTMEYER **17**, 3.
Human Papillomavirus E6 and E7: proteins which deregulate the cell cycle: TOMMASINO AND CRAWFORD **17**, 509.
Life and death by p53: ELLEDGE AND LEE **17**, 923.
Tumour suppressors, kinases and clamps: how p53 regulates the cell cycle in response to DNA damage: COX AND LANE **17**, 501.
Pattern formation
Determinants of blastomere identity in the early *C. elegans* embryo: BOWERMAN **17**, 405.
How many signals does it take?: VENKATESH AND BODMER **17**, 754.
Morphogens in vertebrate development: how do they work?: COOKE **17**, 93.
Transformations in null mutants of Hox genes: do they represent intercalary regenerates?: CRAWFORD **17**, 1065.
pdm-1* and *-2
Tag team sepcification of a neural precursor in the *Drosophila* embryonic central nervous system: SKEATH **17**, 829.
Perforin
Dual mechanisms of lymphocyte-mediated cytotoxicity serve to control and deliver the immune response: SMYTH **17**, 891.
***period* gene**
Are competing intermolecular and intramolecular interactions of PERIOD protein important for the regulation of circadian rhythms in *Drosophila* ?: PRICE **17**, 583.
Permissive
The cryptic life style of adeno-associated virus: BERNS AND LINDEN **17**, 237.
Phage terminase
DNA packaging and cutting by phage terminases: control in phage T4 by a synaptic mechanism: BLACK **17**, 1025.
Phagocytosis
Phagocytosis: BROWN **17**, 109.
The macrophage: GORDON **17**, 977.
Phosphorylation
Cyclin-dependent protein kinases: key regulators of the eukaryotic cell cycle: NIGG **17**, 471.
Phosphotyrosine kinases
Towards unraveling the complexity of T cell signal transduction: ZENNER, ZUR HAUSEN, BURN AND MUSTELIN **17**, 967.
Photomorphogenesis
Illuminating plant development: DUCKETT AND GRAY **17**, 101.
Photoreceptor cells
The dynamics of cytosolic calcium in photoreceptor cells: WILLIAMS **17**, 282.
Phragmoplasts
Pattern and process of wall formation in developing endosperm: OLSEN, LEMMON AND BROWN **17**, 803.
pie-1
Determinants of blastomere identity in the early *C. elegans* embryo: BOWERMAN **17**, 405.
Plant
Disease lesion mimics of maize: a model for cell death in plants: JOHAL, HULBERT AND BRIGGS **17**, 685.
Root gravitropism: MASSON **17**, 119.
Plant form
Regulation of plant form: identification of a molecule controlling cell expansion: TORII AND DENG **17**, 383.
Plant morphogenesis
Pattern and process of wall formation in developing endosperm: OLSEN, LEMMON AND BROWN **17**, 803.
Plaques
Steps towards a mouse model of Alzheimer's disease: CROWTHER **17**, 593.
Plasma membrane
Biological consequences of targeting β1,4-galactosyltransferase to two different subcellular compartments: EVANS, YOUAKIM AND SHUR **17**, 261.
Plasma membrane receptors
The macrophage: GORDON **17**, 977.
Pluripotential cells
Precursor cell types in the germinal zone of the cerebral cortex: WILLIAMS **17**, 391.
Polar coordinate model
Axes, boundaries and coordinates: the ABCs of fly leg development: HELD JR. **17**, 721.
Pollen
Multi-allelic self-incompatibility polymorphisms in plants: CHARLESWORTH **17**, 31.
Poly-gamma-L-glutamates
The cnidarian cnidocyte, a high-tech cellular weaponry: TARDENT **17**, 351.
Polyanions
The cnidarian cnidocyte, a high-tech cellular weaponry: TARDENT **17**, 351.
***Polycomb* group proteins**
Transcriptional silencing of homeotic genes in *Drosophila*: BIENZ AND MÜLLER **17**, 775.
Polycystic kidney disease (PKD)
Animal models of polycystic kidney disease: AZIZ **17**, 703.
Polymorphisms
Multi-allelic self-incompatibility polymorphisms in plants: CHARLESWORTH **17**, 31.
Professional phagocytes
Phagocytosis: BROWN **17**, 109.
Prokaryotes
Cell shape and chromosome partition in prokaryotes or, Why *E. coli* is rod-shaped and haploid: DONACHIE, ADDINALL AND BEGG **17**, 569.
Promoter
Epigenetic regulation of the maize *Spm* transposon: FEDOROFF, SCHLÄPPI AND RAINA **17**, 291.
Properties of membranes
Surrogate cells or Trojan horses: BANGHAM **17**, 1075.
Prostaglandins
Inflammation, reproduction, cancer and all that...The regulation and role of the inducible prostaglandin synthase: HERSCHMAN, XIE AND REDDY **17**, 1031
Protease cell death pathway
bcl-2, a novel regulator of cell death: HOCKENBERY **17**, 631.

Proteasome
A 200-amino acid – ATPase module in search of a basic function: CONFALONIERI AND DUGUET **17**, 639.
Proteasome (26S)
Ubiquitin in homeostasis, development and disease: MULLER AND SCHWARTZ **17**, 677.
Protein kinase A (PKA)
Cell-cell signalling, microtubule organization and RNA localization: is PKA a link?: LASKO **17**, 105.
Protein phosphatases
Frontier questions about sister chromatid separation in anaphase: YANAGIDA **17**, 519.
Protein tyrosine kinases
Cyclin-dependent protein kinases: key regulators of the eukaryotic cell cycle: NIGG **17**, 471.
Frontier questions about sister chromatid separation in anaphase: YANAGIDA **17**, 519.
Melanoma formation in Xiphophorus: a model system for the role of receptor tyrosine kinases in tumorigenesis: MALITSCHEK, FÖRNZLER AND SCHARTL **17**, 1017.
Structure-function relationships in Src family and related protein tyrosine kinases: SUPERTI-FURGA AND COURTNEIDGE **17**, 321.
Towards unraveling the complexity of T cell signal transduction: ZENNER, ZUR HAUSEN, BURN AND MUSTELIN **17**, 967.
Proto-oncogene
Myb: an old oncoprotein with new roles: THOMPSON AND RAMSAY **17**, 341.
Proton pump
Ductin – a proton pump component, a gap junction channel and a neurotransmitter release channel: FINBOW, HARRISON AND JONES **17**, 247.
Quantitative fluorescent PCR
Rapid detection of selected aneuploidies by quantitative fluorescent PCR: ADINOLFI, SHERLOCK AND PERTL **17**, 661.
R point
Origins of G_1 arrest in senescent human fibroblasts: STEIN AND DULIC **17**, 537.
RAD52
Genetic control of intrachromosomal recombination: KLEIN **17**, 147.
Radicals
A radical approach to enzyme catalysis: MARSH **17**, 431.
Raf
Signaling, mitogenesis and the cytoskeleton: where the action is: CARRAWAY AND CARRAWAY **17**, 171.
Ras
Guanine nucleotide exchange factors: activators of the Ras superfamily of proteins: QUILLIAM, KHOSRAVI-FAR, HUFF AND DER **17**, 395.
Signaling, mitogenesis and the cytoskeleton: where the action is: CARRAWAY AND CARRAWAY **17**, 171.
Rb1
Human Papillomavirus E6 and E7: proteins which deregulate the cell cycle: TOMMASINO AND CRAWFORD **17**, 509.
recA
Genetic control of intrachromosomal recombination: KLEIN **17**, 147.
Receptor tyrosine kinase
Melanoma formation in Xiphophorus: a model system for the role of receptor tyrosine kinases in tumorigenesis: MALITSCHEK, FÖRNZLER AND SCHARTL **17**, 1017.
Recombination
A model for repair of radiation-induced DNA double-strand breaks in the extreme radiophile *Deinococcus radiodurans*: MINTON AND DALY **17**, 457.
DNA packaging and cutting by phage terminases: control in phage T4 by a synaptic mechanism: BLACK **17**, 1025.
In vivo biochemistry: physical monitoring of recombination induced by site-specific endonucleases: HABER **17**, 609.
Instability of inhibited replication forks in *E. coli*: KUZMINOV **17**, 733.
Recombination, mutation and the origin of species: COX **17**, 747.
Recycling
Synaptic vesicle recycling intermediates revealed: VIJAYRAGHAVAN **17**, 195.
reeler
Reelin: a novel extracellular matrix protein involved in brain lamination: RUGARLI AND BALLABIO **17**, 832.
Regeneration
Ciliogenesis in sea urchin embryos – a subroutine in the program of development: STEPHENS **17**, 331.
Transformations in null mutants of Hox genes: do they represent intercalary regenerates?: CRAWFORD **17**, 1065.
Regulation
Epigenetic regulation of the maize *Spm* transposon: FEDOROFF, SCHLÄPPI AND RAINA **17**, 291.
Structure-function relationships in Src family and related protein tyrosine kinases: SUPERTI-FURGA AND COURTNEIDGE **17**, 321.
Regulatory checkpoints
Are there DNA damage checkpoints in *E. coli*?: BRIDGES **17**, 63.
Renal cysts
Animal models of polycystic kidney disease: AZIZ **17**, 703.
Repair enzymes
Structure and function of apurinic/apyrimidinic endonucleases: BARZILAY AND HICKSON **17**, 713.
Repeat amplification
A fragile gene: OOSTRA AND WILLEMS **17**, 941.
Replication factories
Nuclear organization: uniting replication foci, chromatin domains and chromosome structure: JACKSON **17**, 587.
Replication forks
Instability of inhibited replication forks in *E. coli*: KUZMINOV **17**, 733.
Replication rate
Are there DNA damage checkpoints in *E. coli*?: BRIDGES **17**, 63.
Replication-induced transcription
Does replication-induced transcription regulate synthesis of the myriad low copy number proteins of *Escherichia coli*?: GUPTASARMA **17**, 987.
Repression
A unique role for enhancers is revealed during early mouse development: MAJUMDER AND DEPAMPHILIS **17**, 881.
Retinoblastoma protein
Origins of G_1 arrest in senescent human fibroblasts: STEIN AND DULIC **17**, 537.
Retinoic acid
Retinoic acid and the differentiation of lymphohaemopoietic stem cells: GÖTTGENS AND GREEN **17**, 187.
Transformations in null mutants of Hox genes: do they represent intercalary regenerates?: CRAWFORD **17**, 1065.
Reverse transcriptase
Structure and function of apurinic/apyrimidinic endonucleases: BARZILAY AND HICKSON **17**, 713.
Rho
Guanine nucleotide exchange factors: activators of the Ras superfamily of proteins: QUILLIAM, KHOSRAVI-FAR, HUFF AND DER **17**, 395.
Riboregulators
Surprising developments in the legume root nodule: COOK **17**, 191.
Risk assessment
UV-induced skin cancer in a hairless mouse model: DE GRUIJL AND FORBES **17**, 651.
RNA
Cell-cell signalling, microtubule organization and RNA localization: is PKA a link?: LASKO **17**, 105.
RNAse H domain
Structure and function of apurinic/apyrimidinic endonucleases: BARZILAY AND HICKSON **17**, 713.
***rnh* mutants**
Instability of inhibited replication forks in *E. coli*: KUZMINOV **17**, 733.
Root
Root gravitropism: MASSON **17**, 119.
Surprising developments in the legume root nodule: COOK **17**, 191.
Root hair
Two ways to skin a plant: the analysis of root and shoot epidermal development in *Arabidopsis*: DOLAN AND ROBERTS **17**, 865.
Rubisco
Rubisco rules fall; gene transfer triumphs: PALMER **17**, 1005.
S phase
Nuclear organization: uniting replication foci, chromatin domains and chromosome structure: JACKSON **17**, 587.
Saccharomyces cerevisiae
Genetic control of intrachromosomal recombination: KLEIN **17**, 147.
Histone H4: TURNER **17**, 1013.
In vivo biochemistry: physical monitoring of recombination induced by site-specific endonucleases: HABER **17**, 609.
Is there a unique form of chromatin at the *Saccharomyces cerevisiae* centromeres?: BASRAI AND HIETER **17**, 669.
Stress signaling in yeast: RUIS AND SCHÜLLER **17**, 959.
Salmonella typhimurium
Recombination, mutation and the origin of species: COX **17**, 747.
saxophone (sax)
How many receptors does it take?: WHARTON **17**, 13.
Scll protein
The SMC proteins and the coming of age of the chromosome scaffold hypothesis:

SAITOH, GOLDBERG AND EARNSHAW **17**, 759.
Sea urchin embryos
Ciliogenesis in sea urchin embryos – a subroutine in the program of development: STEPHENS **17**, 331.
Selection criteria
Model systems in developmental biology: BOLKER **17**, 451.
Self-incompatibility
Multi-allelic self-incompatibility polymorphisms in plants: CHARLESWORTH **17**, 31.
Selfish genetic elements
Fractious chromosomes: hybrid disruption and the origin of selfish genetic elements: MCVEAN **17**, 579.
Seminal plasma
Seminalplasmin: SITARAM AND NAGARAJ **17**, 415.
Seminalplasmin
Seminalplasmin: SITARAM AND NAGARAJ **17**, 415.
Senescence
Origins of G_1 arrest in senescent human fibroblasts: STEIN AND DULIC **17**, 537.
The initiation of senescence and its relationship to embryonic cell differentiation: ROSENBERGER **17**, 257.
Serine protease
The making of a fly leg: a model for epithelial morphogenesis: VON KALM, FRISTROM AND FRISTROM **17**, 693.
Serine/threonine transmembrane proteins
How many receptors does it take?: WHARTON **17**, 13.
Sex determination
Moving up the hierarchy: A hypothesis on the evolution of a genetic sex determination pathway: WILKINS **17**, 71.
Sex determination in Hymenoptera: a need for genetic and molecular studies: BEUKEBOOM **17**, 813.
SH2 and SH3 domains
Structure-function relationships in Src family and related protein tyrosine kinases: SUPERTI-FURGA AND COURTNEIDGE **17**, 321.
Signal transduction
Compartments and appendage development in *Drosophila*: BLAIR **17**, 299.
Cyclin-dependent protein kinases: key regulators of the eukaryotic cell cycle: NIGG **17**, 471.
Origins of G_1 arrest in senescent human fibroblasts: STEIN AND DULIC **17**, 537.
Phagocytosis: BROWN **17**, 109.
Root gravitropism: MASSON **17**, 119.
Signal transduction through integrins: a central role for focal adhesion?: RICHARDSON AND PARSONS **17**, 229.
Signaling, mitogenesis and the cytoskeleton: where the action is: CARRAWAY AND CARRAWAY **17**, 171.
Towards unraveling the complexity of T cell signal transduction: ZENNER, ZUR HAUSEN, BURN AND MUSTELIN **17**, 967.
SIL elements
Transcriptional silencing of homeotic genes in *Drosophila*: BIENZ AND MÜLLER **17**, 775.
Single-strand annealing
In vivo biochemistry: physical monitoring of recombination induced by site-specific endonucleases: HABER **17**, 609.
Site-specific endonucleases
In vivo biochemistry: physical monitoring of recombination induced by site-specific endonucleases: HABER **17**, 609.
situs invertus
Left-right asymmetry in vertebrates: ALMIRANTIS **17**, 79.
Skeletal myogenesis
MyoD and myogenesis in *C. elegans*: KRAUSE **17**, 219.
Regulation of vertebrate muscle differentiation by thyroid hormone: the role of the *myoD* gene family: MUSCAT, DOWNES AND DOWNHAN **17**, 211.
The MyoD family of transcription factors and skeletal myogenesis: RUDNICKI AND JAENISCH **17**, 203.
Skin cancer
UV-induced skin cancer in a hairless mouse model: DE GRUIJL AND FORBES **17**, 651.
skn-1
Determinants of blastomere identity in the early *C. elegans* embryo: BOWERMAN **17**, 405.
Small tandem repeats (STRs)
Rapid detection of selected aneuploidies by quantitative fluorescent PCR: ADINOLFI, SHERLOCK AND PERTL **17**, 661.
SMC proteins
The SMC proteins and the coming of age of the chromosome scaffold hypothesis: SAITOH, GOLDBERG AND EARNSHAW **17**, 759.
Smooth muscle
Structure-function relationships in smooth muscle: the missing links: SMALL **17**, 785.
Soybean
Surprising developments in the legume root nodule: COOK **17**, 191.
Spindle formation
Chromosomes take an active role in spindle assembly: WATERS AND SALMON **17**, 911.
Frontier questions about sister chromatid separation in anaphase: YANAGIDA **17**, 519.
Src family
Structure-function relationships in Src family and related protein tyrosine kinases: SUPERTI-FURGA AND COURTNEIDGE **17**, 321.
START
G_1 regulation and checkpoints operating around START in fission yeast: WOOLLARD AND NURSE **17**, 481.
Steady-state bacterial populations
Overview of controls in the *Escherichia coli* cell cycle: VINELLA AND D'ARI **17**, 527.
Stress response elements
Stress signaling in yeast: RUIS AND SCHÜLLER **17**, 959.
***string* gene**
Drosophila development pulls the strings of the cell cycle: REED **17**, 553.
Supernumerary genome elements
Fractious chromosomes: hybrid disruption and the origin of selfish genetic elements: MCVEAN **17**, 579.
***Suppressor-mutator (Spm)* transposon**
Epigenetic regulation of the maize *Spm* transposon: FEDOROFF, SCHLÄPPI AND RAINA **17**, 291.
Swarming
The significances of bacterial colony patterns: SHAPIRO **17**, 597.
Synaptic vesicles
Synaptic vesicle recycling intermediates revealed: VIJAYRAGHAVAN **17**, 195.
T cell antigen receptor
Developmental regulation of αβ T cell antigen receptor assembly in immature CD4+CD8+ thymocytes: KEARSE, ROBERTS, WIEST AND SINGER **17**, 1049.
Towards unraveling the complexity of T cell signal transduction: ZENNER, ZUR HAUSEN, BURN AND MUSTELIN **17**, 967.
Target identity
Specifying the target identity of motoneurons: TOSNEY, HOTARY AND LANCE-JONES **17**, 379.
Tat
A 200-amino acid – ATPase module in search of a basic function: CONFALONIERI AND DUGUET **17**, 639.
TATA-box
A unique role for enhancers is revealed during early mouse development: MAJUMDER AND DEPAMPHILIS **17**, 881.
Tau protein
Steps towards a mouse model of Alzheimer's disease: CROWTHER **17**, 593.
Tenascins
The complexity in regulating the expression of tenascins: CHIQUET-EHRISMANN, HAGIOS AND SCHENK **17**, 873.
Terminus
Instability of inhibited replication forks in *E. coli*: KUZMINOV **17**, 733.
TGF-β receptors
How many receptors does it take?: WHARTON **17**, 13.
How many signals does it take?: VENKATESH AND BODMER **17**, 754.
Microsatellite instability and a TGF-β receptor: clues to a growth control pathway: BENSON AND WELLS **17**, 1009.
thick veins (tkv)
How many receptors does it take?: WHARTON **17**, 13.
Three-dimensional structure
Membrane protein assembly: Rules of the game: VON HEIJNE **17**, 25.
Thymocyte development
Developmental regulation of αβ T cell antigen receptor assembly in immature CD4+CD8+ thymocytes: KEARSE, ROBERTS, WIEST AND SINGER **17**, 1049.
Thyroid hormone
Regulation of vertebrate muscle differentiation by thyroid hormone: the role of the *myoD* gene family: MUSCAT, DOWNES AND DOWNHAN **17**, 211.
TPR-repeat proteins
Frontier questions about sister chromatid separation in anaphase: YANAGIDA **17**, 519.
Transcription
A role for Y-box proteins in cell proliferation: LADOMERY AND SOMMERVILLE **17**, 9.
A unique role for enhancers is revealed during early mouse development: MAJUMDER AND DEPAMPHILIS **17**, 881.
Drosophila development pulls the strings of the cell cycle: REED **17**, 553.
Modulation of AP-1/ATF transcription factor activity by the adenovirus-E1A oncogene

products: HAGMEYER, ANGEL AND VAN DAM **17**, 621.
Myb: an old oncoprotein with new roles: THOMPSON AND RAMSAY **17**, 341.
The making of a fly leg: a model for epithelial morphogenesis: VON KALM, FRISTROM AND FRISTROM **17**, 693.
The MyoD family of transcription factors and skeletal myogenesis: RUDNICKI AND JAENISCH **17**, 203.
Transcriptional silencing of homeotic genes in *Drosophila*: BIENZ AND MÜLLER **17**, 775.
Tumour suppressors, kinases and clamps: how p53 regulates the cell cycle in response to DNA damage: COX AND LANE **17**, 501.

Transcytosis
Regulation of protein traffic in polarized epithelial cells: MOSTOV AND CARDONE **17**, 129.

Transfection
Nm23/nucleoside diphosphate kinase: Toward a structural and biochemical understanding of its biological functions: DE LA ROSA, WILLIAMS AND STEEG **17**, 53.

Transgenes
MHox and vertebrate skeletogenesis: the long and the short of it: BRICKELL **17**, 750.
Multi-allelic self-incompatibility polymorphisms in plants: CHARLESWORTH **17**, 31.

Translation initiation
Protein synthesis in eukaryotic organisms: new insights into the function of translation initiation factor eIF-3: HANNIG **17**, 915.

Transposition
Epigenetic regulation of the maize *Spm* transposon: FEDOROFF, SCHLÄPPI AND RAINA **17**, 291.

Trapoxin
Trichostatin A and trapoxin: novel chemical probes for the role of histone acetylation in chromatin structure and function: YOSHIDA, HORINOUCHI AND BEPPU **17**, 423.

Trichome
Two ways to skin a plant: the analysis of root and shoot epidermal development in *Arabidopsis*: DOLAN AND ROBERTS **17**, 865.

Trichostatin A
Trichostatin A and trapoxin: novel chemical probes for the role of histone acetylation in chromatin structure and function: YOSHIDA, HORINOUCHI AND BEPPU **17**, 423.

Trinucleotide disease
A fragile gene: OOSTRA AND WILLEMS **17**, 941.

Trophectoderm
Epidermal growth factor receptor function in early mammalian development: WILEY, ADAMSON AND TSARK **17**, 839.

Tubulin
Ciliogenesis in sea urchin embryos – a subroutine in the program of development: STEPHENS **17**, 331.
Keeping the beat: form meets function in the *Chlamydomonas* flagellum: JOHNSON **17**, 847.

Tumor suppression
Drosophila WARTS – tumor suppressor and member of the myotonic dystrophy protein kinase family: WATSON **17**, 673.
Giant leap for p53, small step for drug design: ANDERSON AND TEGTMEYER **17**, 3.
Melanoma formation in Xiphophorus: a model system for the role of receptor tyrosine kinases in tumorigenesis: MALITSCHEK, FÖRNZLER AND SCHARTL **17**, 1017.
Stopped for repairs: SANCHEZ AND ELLEDGE **17**, 545.

Tumour metastasis
Nm23/nucleoside diphosphate kinase: Toward a structural and biochemical understanding of its biological functions: DE LA ROSA, WILLIAMS AND STEEG **17**, 53.

Tyrosine phosphorylation
Towards unraveling the complexity of T cell signal transduction: ZENNER, ZUR HAUSEN, BURN AND MUSTELIN **17**, 967.

Ubiquitin
Ubiquitin in homeostasis, development and disease: MULLER AND SCHWARTZ **17**, 677.

Ultraviolet radiation
Stopped for repairs: SANCHEZ AND ELLEDGE **17**, 545.
UV-induced skin cancer in a hairless mouse model: DE GRUIJL AND FORBES **17**, 651.

V(D)J recombination
Menage à trois: double strand break repair, V(D)J recombination and DNA-PK: JEGGO, TACCIOLI AND JACKSON **17**, 949.

Ventricular zone cells
Precursor cell types in the germinal zone of the cerebral cortex: WILLIAMS **17**, 391.

Vertebrate
Regulation of vertebrate muscle differentiation by thyroid hormone: the role of the *myoD* gene family: MUSCAT, DOWNES AND DOWNHAN **17**, 211.

Vertebrate spinal cord
Specifying the target identity of motoneurons: TOSNEY, HOTARY AND LANCE-JONES **17**, 379.

Vertebrates
Left-right asymmetry in vertebrates: ALMIRANTIS **17**, 79.

Virus assembly
DNA packaging and cutting by phage terminases: control in phage T4 by a synaptic mechanism: BLACK **17**, 1025.

Wall deposition
Pattern and process of wall formation in developing endosperm: OLSEN, LEMMON AND BROWN **17**, 803.

World Wide Web (WWW)
Development, databases and the internet: BARD AND DAVIES **17**, 999.

Xenopus egg extract
Out-of-body experiences: cell-free cell death: HENGARTNER **17**, 549.

Xenopus
Morphogens in vertebrate development: how do they work?: COOKE **17**, 93.

Xiphophorus
Melanoma formation in Xiphophorus: a model system for the role of receptor tyrosine kinases in tumorigenesis: MALITSCHEK, FÖRNZLER AND SCHARTL **17**, 1017.

Y chromosome
The origin and function of the mammalian Y chromosome and Y-borne genes – an evolving understanding: MARSHALL GRAVES **17**, 311.

Y-box proteins
A role for Y-box proteins in cell proliferation: LADOMERY AND SOMMERVILLE **17**, 9.

Yap1p
Stress signaling in yeast: RUIS AND SCHÜLLER **17**, 959.

YB family
A role for Y-box proteins in cell proliferation: LADOMERY AND SOMMERVILLE **17**, 9.

Yeast
Protein synthesis in eukaryotic organisms: new insights into the function of translation initiation factor eIF-3: HANNIG **17**, 915.
The formation and functioning of yeast mitotic spindles: MASUDA **17**, 45.

Zebrafish
Transparent things: cell fates and cell movements during early embryogenesis of zebrafish: SOLNICA-KREZEL, STEMPLE AND DRIEVER **17**, 931.
